

## **Determining the Status of Your Solar Array (Enphase)**

*In the excitement of completing and energizing a new solar installation, there is a lot of new information for the system owner to learn and process! It's fairly common for folks to reach out a few months later and ask, "Hey PV Squared, how do I know if my solar array is working?" While we're always happy to hear from clients, we also want to provide **you** with the tools to find this answer as well! A version of this information is also included in your System Guide.*

### **Enphase Monitoring Platform**

If your system is connected to the internet, you can log into the Enphase monitoring platform and check your system's status and performance.

- Desktop version: <https://enlighten.enphaseenergy.com>
- Mobile App version: [Enphase Enlighten](#)

For detailed information on using the Monitoring Platform, please [view this guide](#).

**We highly recommend that you install the app and enable push notifications** so that Enphase can automatically notify you if their algorithm detects hardware failures. To enable alerts in both the website and app see the below instructions.
